

Provide information about chemicals in a flavour or fragrance blend in a pre-introduction report

You must complete this form to provide chemical identity information about your chemicals if all of the following apply:

- You are an introducer.
- You know the proper names for the chemicals in your blend.
- 2 or more chemicals to be introduced in your blend will be 'low-risk flavour or fragrance blend introductions'.
- You are uploading this form with your pre-introduction report in the AICIS Business Services online portal.

At the same time, you can also use this form to provide information about chemicals in your blend that are not on the IFRA Transparency List.

• Giving false or misleading information is a serious offence. We may pass on the information in this form to other agencies as authorised or required by law.

• Your personal details are protected by law, including the Privacy Act 1988. Important information about how we handle your personal details is in our privacy statement at www.industrialchemicals.gov.au/privacy. You should read and understand this information before completing this form.

Use BLOCK LETTERS

Section 1: Business and contact details (Note: you must have an AICIS Business Services account)

Name of business providing this information:

AICIS Business ID:

Business contact person's email address:

Agent's email address (if applicable):

Section 2: Name(s) of blend

By what name(s) is the flavour or fragrance blend known to you?

Section 3: Provide information about the chemicals in your blend

You must use the table on the next page to provide chemical identity information if there are 2 or more chemicals in your flavour or fragrance blend that meet the criteria for 'low-risk flavour or fragrance blend introductions'.

For each of these chemicals, you must fill out the information in **column 2** (proper name — CAS or IUPAC), **column 3** (CAS number — if known) and **column 4** (any other names you use to refer to your chemical).

You can also use this table to provide information about any chemicals in your flavour or fragrance blend that are **not** on the IFRA Transparency List. To do this, you should also complete **column 5** (details of any hazard characteristics known to you) and **columns 6 and 7** (related to the concentration of the chemical in the flavour or fragrance blend). Note: the concentration will generally be the same at introduction and end use. You **don't** need to work out the concentration of the chemical in each type of product at end use.

Reminder: you only need to provide information about chemicals if you are categorising their introduction as reported (low-risk flavour or fragrance blend introductions). You do not need to include information about any chemicals in the blend that are already on our Inventory and you are categorising their introduction as listed.

Section 3: Provide information about the chemicals in your blend (continued)

Chemical	Proper name (CAS or IUPAC)	CAS number (if assigned)	Any other names you use to refer to your chemical	Details of any hazard characteristics known to you	Maximum concentration of your chemical in the blend at introduction (%)	Maximum concentration of your chemical in the blend at end use (%)
